PROJECT DESCRIPTION

Eventify

Travelling and site seeing have never been easier.

WHAT IS EVENTIFY?

Web-Based platform- dynamic web application designed to streamline the discovery and management of local events.

User-Friendly Interface- browsing, filtering and searching for events by location, date, and category.

WHY USE EVENTIFY?

- Event Discovery – Simplified event discovery eliminating the need to check multiple websites.
- Supporting local and small businesses – Promotional tools will allow business to work together and with Eventify directly.
- User Authentication - Secure login and registration
- Event Creation & Management - Users can seamlessly create, edit, and manage their own events, making it a platform for both event-goers and organizers.

IN SCOPE

- ✓ **Events Page** – Lists events with filters and details.
- ✓ **User Authentication** – Login & registration with pop-up confirmation.
- ✓ **Search Functionality** – Search by city or keyword with real-time filtering.
- ✓ **User-Generated Events** – Users can add, edit, and manage events.
- ✓ **Basic UI & Navigation** – Clean, user-friendly interface.

OUT-OF- SCOPE

✗ **Mobile App Version**

- Eventify is only available as a web application.

✗ **AI-Powered Event Recommendations**

- No machine learning for personalized event suggestions.

DETAILED DEMO

Pages we will show

- Home page
- Login Page
- Registration
- Events page

DETAILED DEMO

Home-Page Prototype

Vibrant Gradient Background

Prominent Search Bar

Centered Branding

Clean and minimal Layout

DETAILED DEMO

Login Prototype

Lucia Auth Integration

- Secure sessions stored in cookies.
- Argon 2 hashing (via Zig) checks credentials on the backend.

Minimal Form

Username and password for quick sign-in.

DETAILED DEMO

Registration Prototype

User Account Creation:

- Fields for email, password, confirm password

Password Security:

- Partial hash checked against Have I Been Pwned to detect compromised passwords.
- Argon2 hashing on the server for secure storage.

Redirect flow:

- User is redirected to the login page to finalize sign-in.

TECHNOLOGIES USED

SvelteKit

- **Frontend Framework** for building reactive web pages

Tailwind CSS

- **Utility-First CSS** framework that enables rapid UI styling

Bun RunTime

- **High-Performance** JavaScript/Type Script Runtime

Lucia Auth

- **Authentication Library** managing session cookies

Argon2 + Zig

- **Password Hashing**

PostgreSQL

- **Relational Database**

CONCLUSION

Project Closure Report

- 📌 **User Experience Matters** – Simple UI boosts engagement.
- 📌 **Team Communication is Key** – Ensures smooth progress.
- 📌 **Testing is Crucial** – Catches issues before deployment.
- 📌 **Time Management Helps** – Milestones keep work on track.

CONCLUSION

Best Practices

Agile Development – Iterative improvements increase flexibility.

User-Centric Design – Enhances engagement and usability.

Modular Code – Eases development and debugging.

Version Control – Git branching improves collaboration.

Security First – Authentication and validation protect users.

THANK YOU

Eventify Team
